Sangram Kakade

Python Developer

(+91) 9975159162 | sangramrajekakade@gmail.com | Sangram Kakade | About Me | Dighi, Pune

Professional Summary

Over 8+ years of hands-on experience as a Python Developer, specializing in Web development and Python automation, and Web scraping for AI and Retrieval-Augmented Generation (RAG) systems, along with building scalable backend solutions.

- Proficient knowledge of Django Framework.
- Strong knowledge with Python, Web Scraping.
- Strong knowledge with Linux.
- Good knowledge with HTTP requests, selenium.
- Foundational understanding of OpenAI API, Large Language Models (LLMs), and Retrieval-Augmented Generation (RAG) techniques.
- Proficient in RESTful API design and HTTP methods.
- Basic knowledge of GCP, Azure and AWS.
- Strongly follow PEP-8 coding standard

Experience

Senior Engineer | **Tata Communications Limited** — Pune

04/2022 - Present (hybrid)

- Developed backend services and internal tools using Python and Django, automating telecom operations and improving efficiency.
- Built and deployed an AI-powered RAG system with OpenAI API, LangChain, and LlamaIndex to extract and summarize industrial project data.
- Designed custom web scraping pipelines and integrated LLMs into backend workflows, reducing manual analysis time by over 80%.
- Researched and implemented innovative AI/automation solutions to support network expansion and collaborated with cross-functional teams to deliver end-to-end tooling.

Senior Data Analyst | **eClerx** — 01/2021 - 04/2022 (Remote)

- Built and maintained robust web scraping pipelines using Python, Selenium, Requests, and BeautifulSoup to extract product, pricing, and availability data from global e-commerce sites like Mouser, Avnet, and Google Shopping.
- Automated and scheduled scraping tasks across daily to quarterly cycles, delivering clean and structured outputs (CSV, JSON) for business intelligence and competitive analysis.
- Optimized scraping logic and processing workflows, reducing execution time by up to 40% and improving production reliability.

Python Developer | **Kisan** — 10/2020 - 12/2020 (Remote)

- Developed and maintained web applications using the Django framework, focusing on agriculture-related business needs such as user registration, product listings, and event management modules.

Junior Python Developer | **Katalyst Technologies** — 10/2018 - 08/2020 (Full-time)

- Developed a custom Tailoring ERP system using Python 3.5, Django, and MySQL, streamlining core business operations.
- Built scalable modules for orders, inventory, and customer management using Django's MVT architecture. Designed responsive UIs with Bootstrap and JavaScript, improving overall user experience.

Projects

AI feasibility & Network Expansion Tool openAI, LLM, web Scraping

Our goal is to gather information about industrial projects that are currently under development, including project name, cost, current status, and location (with latitude and longitude). In this context, my role involves defining the overall project structure, which includes:

- Scraping Data: Defined specific websites to scrape relevant information from.
- RAG-Based Agents: I have developed RAG-based agents to fetch and categorize internet-based information efficiently. These agents evaluate the quality and completeness of the data as it is collected.

API based Google & LinkedIn scraper (sales leads)

The project need was to create automated Python and selenium script for Scraping Google search results and LinkedIn CEO profile and scrap profile information like Name, Company name, designation. Using this profile information can be extracted. With the help of SMTP and Python DNS package we can find professional email address too.

- Designed and implemented a web-scraping pipeline that extracted 100k data points per week, improving data collection efficiency by 80%

Easy Tailor (Tailoring ERP)

Designed and developed a web-based ERP application using Python and the Django framework, following the MVT architectural pattern to ensure flexibility and scalability. Built reusable components and libraries to support future feature extensions and improve development efficiency. Focused on modular design to streamline tailoring operations and enhance maintainability of the system. Implemented clean, extensible code structures for seamless integration and long-term usability.

Skills

Programming Languages: Python, Django Framework, Web Scraping, Open AI, Requests, Selenium, Bootstrap, JavaScript, RESTful API, OpenAI API, LLMs, RAG, LangChain, Python Requests, BeautifulSoup, lxml, Ubuntu 18.4, Fedora, CentOS, RedHat Linux (RHEL), Debian, MySQL, PostgreSQL, Git, Docker.

Tools and Frameworks: GitHub, Django, Selenium WebDriver.

Education

VIIT, Baramati Baramati, Pune
B.C.A. 2010 - 2013

VIIT, Baramati Baramati, Pune
M.C.A (not certified) 2013 - 2016

Languages

Marathi (native), English (proficient), Hindi(proficient)
